COLORECTAL CANCER SCREENING GUIDELINE
for men and women at average risk

Testing Options

- **Stool-based tests** look for signs of cancer in a person’s stool.
- **Visual exams** such as colonoscopy or CT colonography, look at the inside of the colon and rectum for polyps or cancer.

Any abnormal result on non-colonoscopy screening tests should be followed up with a timely colonoscopy to complete the screening process. Talk to your doctor about screening, and contact your insurance provider about insurance coverage for screening.
